## Instruction Manual

## Manuel d'instructions

## Betriebsanweisung

## Manual de instrucciones

### English

Please read these instructions carefully make sure you understand them before using this unit.

### Français

Avant d'utiliser cet appareil, veuillez lire attentivement les instructions et assurez-vous de les avoir comprises.

### Deutsch

Lesen Sie diese Hinweise zur Handhabung des Geräts aufmerksam durch. Verwenden Sie es erst, wenn Sie sicher sind, daß Sie alle Anweisungen verstanden haben.

### Español

Lea atentamente las instrucciones y asegúrese de entenderlas antes de utilizar esta unidad.

## IDENTIFICATION (WHAT IS WHAT?)

- |                                  |                               |
|----------------------------------|-------------------------------|
| 1. Cylinder Cover                | 14. Saw Chain                 |
| 2. Front Handle                  | 15. Saw Bar                   |
| 3. Front Handle Guard            | 16. Bumper Spike              |
| 4. Starter Cover                 | 17. Chain Catcher             |
| 5. Chain Oil Tank                | 18. Clutch Cover              |
| 6. Starter Handle                | 19. Rear Hand Guard           |
| 7. Carburetor Adjusting Screw    | 20. Throttle Control          |
| 8. Choke Control / Throttle Lock | 21. Throttle Lock             |
| 9. Rear Handle                   | 22. Bar/Chain Adjustment Tool |
| 10. ON/OFF Stop Switch           | 23. Chain Tensioning Screw    |
| 11. Fuel Tank                    | 24. Operator's Manual         |
| 12. Muffler                      | 25. Guide Bar Cover           |
| 13. Bar Tip Sprocket             | 26. Primer Bulb               |

## IDENTIFICATION OF SYMBOLS

**WARNING!** This chain saw can be dangerous! Careless or improper use can cause serious or even fatal injury.

Read and understand the instruction manual before using the chain saw.

Always use two hands when operating the chain saw.

**WARNING!** Contacting the guide bar tip with any object should be avoided; tip contact may cause the guide bar to move suddenly upward and backward, which may cause serious injury.

Always wear ear protection.

# SAFETY RULES

**⚠ WARNING:** Always disconnect spark plug wire and place wire where it cannot contact spark plug to prevent accidental starting when setting up, transporting, adjusting or making repairs except carburetor adjustments.

Because a chain saw is a high-speed wood-cutting tool, special safety precautions must be observed to reduce the risk of accidents. Careless or improper use of this tool can cause serious injury.

## PLAN AHEAD

- Read this manual carefully until you completely understand and can follow all safety rules, precautions, and operating instructions before attempting to use the unit.
- Restrict the use of your saw to adult users who understand and can follow safety rules, precautions, and operating instructions found in this manual.

- Wear protective gear. Always use steel-toed safety footwear with non-slip soles; snug-fitting clothing; heavy-duty, non-slip gloves; eye protection such as non-fogging, vented goggles or face screen; an approved safety hard hat; and sound barriers (ear plugs or mufflers) to protect your hearing. Regular users should have hearing checked regularly as chain saw noise can damage hearing. Secure hair above shoulder length.
- Keep all parts of your body away from the chain when the engine is running.
- Keep children, bystanders, and animals a minimum of 10 Meters away from the work area. Do not allow other people or animals to be near the chain saw when starting or operating the chain saw.
- Do not handle or operate a chain saw when you are fatigued, ill, or upset, or if you have taken alcohol, drugs, or medication. You must be in good physical condition and mentally alert. Chain saw work is strenuous. If you have any condition that might be aggravated by strenuous work,

check with your doctor before operating a chain saw.

- Carefully plan your sawing operation in advance. Do not start cutting until you have a clear work area, secure footing, and, if you are felling trees, a planned retreat path.

## OPERATE YOUR SAW SAFELY

- Do not operate a chain saw with one hand. Serious injury to the operator, helpers, bystanders or any combination of these persons may result from one-handed operation. A chain saw is intended for two-handed use.
- Operate the chain saw only in a well-ventilated outdoor area.
- Do not operate saw from a ladder or in a tree, unless you are specifically trained to do so.
- Make sure the chain will not make contact with any object while starting the engine. Never try to start the saw when the guide bar is in a cut.
- Do not put pressure on the saw at the end of the cut. Applying pressure can cause you to lose control when the cut is completed.
- Stop the engine before setting the saw down.
- Be alert for springback when cutting a limb that is under tension so you will not be struck by the limb or saw when the tension in the wood fibers is released.

## MAINTAIN YOUR SAW IN GOOD WORKING ORDER

- Have all chain saw service performed by a qualified service dealer with the exception of the items listed in the maintenance section of this manual. For example, if improper tools are used to remove or hold the flywheel when servicing the clutch, structural damage to the flywheel can occur and cause the flywheel to burst.
- Make certain the saw chain stops moving when the throttle trigger is released. For correction, refer to "Carburetor Adjustments."
- Never modify your saw in any way. Use only attachments supplied or specifically recommended by the manufacturer.
- Keep the handles dry, clean, and free of oil or fuel mixture.
- With the engine stopped, hand carry the chain saw with the muffler away from your body, and the guide bar and chain to the rear, preferably covered with a guide bar cover.
- Keep fuel and oil caps, screws, and fasteners securely tightened.
- Use only **Jonsered** accessories and replacement parts as recommended.

## HANDLE FUEL WITH CAUTION

- Do not smoke while handling fuel or while operating the saw.
- Eliminate all sources of sparks or flame in the areas where fuel is mixed or poured. There should be no smoking, open flames,

or work that could cause sparks. Allow engine to cool before refueling.

- Mix and pour fuel in an outdoor area on bare ground; store fuel in a cool, dry, well ventilated place; and use an approved, marked container for all fuel purposes. Wipe up all fuel spills before starting saw.
- Move at least 10 feet (3 meters) from fueling site before starting engine.
- Turn the engine off and let saw cool in a non-combustible area, not on dry leaves, straw, paper, etc. Slowly remove fuel cap and refuel unit.
- Store the unit and fuel in an area where fuel vapors cannot reach sparks or open flames from water heaters, electric motors or switches, furnaces, etc.

## KICKBACK

**WARNING:** Kickback can occur when the moving chain contacts an object at the upper portion of the tip of the guide bar or when the wood closes in and pinches the saw chain in the cut. Contact at the upper portion of the tip of the guide bar can cause the chain to dig into the object, which stops the chain for an instant. The result is a lightning fast, reverse reaction which kicks the guide bar up and back toward the operator. If the saw chain is pinched along the top of the guide bar, the guide bar can be driven rapidly back toward the operator. Either of these reactions can cause loss of saw control which can result in serious injury. **Guard against kickback.**

**Rotational Kickback** is the rapid upward and backward motion of the chain saw that can occur when the moving saw chain near the upper portion of the tip of the guide bar contacts an object such as a log or a branch. Pinch-Kickback and Pull-In occur when the chain is suddenly stopped by being pinched, caught, or by contacting a foreign object in the wood. This sudden stopping of the chain results in a reversal of the chain force used to cut wood and causes the saw to move in the opposite direction of the chain rotation. Pinch-Kickback drives the saw straight back toward the operator. Pull-In pulls the saw away from the operator. Either reaction can result in loss of control and serious injury.

### Avoid Pinch-Kickback:

- Be extremely aware of situations or obstructions that can cause material to pinch the top of or otherwise stop the chain.
- Do not cut more than one log at a time.
- Do not twist the saw as the bar is withdrawn from an undercut when bucking.

### Avoid Pull-In:

- Always begin cutting with the engine at full speed and the saw housing against wood.
- Use wedges made of plastic or wood. Never use metal to hold the cut open.

Kickback Path

Avoid Obstructions

Clear The Working Area

## REDUCE THE CHANCE OF KICKBACK

- Recognize that kickback can happen. With a basic understanding of kickback, you can reduce the element of surprise which contributes to accidents.
- Never let the moving chain contact any object at the tip of the guide bar.
- Keep the working area free from obstructions such as other trees, branches, rocks, fences, stumps, etc. Eliminate or avoid any obstruction that your saw chain could hit while you are cutting through a particular log or branch.
- Keep your saw sharp and properly tensioned. A loose or dull chain can increase the chance of kickback occurring. Follow manufacturer's chain sharpening and maintenance instructions. Check tension at regular intervals with the engine stopped, never with the engine running. Make sure the bar clamp nuts are securely tightened after tensioning the chain.
- Begin and continue cutting at full speed. If the chain is moving at a slower speed, there is greater chance of kickback occurring.
- Cut one log at a time.
- Use extreme caution when re-entering a previous cut.
- Do not attempt cuts starting with the tip of the bar (plunge cuts).
- Watch for shifting logs or other forces that could close a cut and pinch or fall into chain.
- Use the Reduced-Kickback Guide Bar and Low-Kickback Chain specified for your saw.

## MAINTAIN CONTROL

Stand to the left of the saw

Never reverse hand positions

- Keep a good, firm grip on the saw with both hands when the engine is running and don't let go. A firm grip will help you reduce kickback and maintain control of the saw. Keep the fingers of your left hand encircling and your left thumb under the front handlebar. Keep your right hand completely around the rear handle whether you are right handed or left handed. Keep your left arm straight with the elbow locked.
- Position your left hand on the front handlebar so it is in a straight line with your right hand on the rear handle when making bucking cuts. Never reverse right and left hand positions for any type of cutting.
- Stand with your weight evenly balanced on both feet.
- Stand slightly to the left side of the saw to keep your body from being in a direct line with the cutting chain.
- Do not overreach. You could be drawn or thrown off balance and lose control of the saw.
- Do not cut above shoulder height. It is difficult to maintain control of saw above shoulder height.

## KICKBACK SAFETY FEATURES

**⚠ WARNING:** The following features are included on your saw to help reduce the hazard of kickback; however, such features will not totally eliminate this dangerous reaction. As a chain saw user, do not rely only on safety devices. You must follow all safety precautions, instructions, and maintenance in this manual to help avoid kickback and other forces which can result in serious injury.

- Reduced-Kickback Guide Bar, designed with a small radius tip which reduces the size of the kickback danger zone on the bar tip.
- Low-Kickback Chain, designed with a contoured depth gauge and guard link which deflect kickback force and allow wood to gradually ride into the cutter.
- Handguard, designed to reduce the chance of your left hand contacting the chain if your hand slips off the front handlebar.
- Position of front and rear handlebars, designed with distance between handles and

“in-line” with each other. The spread and “in-line” position of the hands provided by this design work together to give balance and resistance in controlling the pivot of the saw back toward the operator if kickback occurs.

## Low-Kickback Chain

## CHAIN BRAKE

**⚠ WARNING:** Your chain saw is equipped with a chain brake that is designed to stop the chain immediately if you get a kickback. The chain brake reduces the risk of accidents, but only you can prevent them. **DO NOT ASSUME THAT THE CHAIN BRAKE WILL PROTECT YOU IN THE EVENT OF A KICKBACK.**

- Tip contact in some cases may cause a lightning fast reverse REACTION, kicking the guide bar up and back toward the operator.
- Pinching the saw chain along the top of the guide bar may push the guide bar rapidly back toward the operator.
- Either of these reactions may cause you to lose control of the saw which could result in serious injury. Do not rely exclusively upon the safety devices built into your saw.

**SAFETY NOTICE:** Exposure to vibrations through prolonged use of gasoline powered hand tools could cause blood vessel or nerve damage in the fingers, hands, and joints of people prone to circulation disorders or abnormal swellings. Prolonged use in cold weather has been linked to blood vessel damage in otherwise healthy people. If symptoms occur such as numbness, pain, loss of strength, change in skin color or texture, or loss of feeling in the fingers, hands, or joints, discontinue the use of this tool and seek medical attention. An anti-vibration system does not guarantee the avoidance of these problems. Users who operate power tools on a continual and regular basis must monitor closely their physical condition and the condition of this tool.

# ASSEMBLY

Protective gloves (not provided) should be worn during assembly.

## ATTACHING THE BUMPER SPIKE

- Attach the bumper spike with the two screws as illustrated. The bumper spike may be used as a pivot when making a cut.

## ATTACHING THE BAR & CHAIN (If not already attached)

**WARNING:** Recheck each assembly step if the saw is received assembled. Always wear gloves when handling the chain. The chain is sharp and can cut you even when it is not moving!

- Loosen and remove the clamp nuts and the bar clamp from the saw.
- Remove the plastic shipping spacer (if present).

- An adjusting pin and screw is used to adjust the tension of the chain. It is very important when assembling the bar, that the pin located on the adjusting screw aligns into a hole in the bar. Turning the screw will move the adjustment pin up and down the screw. Locate this adjustment before you begin mounting the bar onto the saw. See illustration below.

Adjustment located on Chain Brake

- Turn the adjusting screw counterclockwise to move the adjusting pin almost as far as it will go to the rear. This should allow the pin to be near the correct position. Further adjustment may be necessary as you mount the bar.
- Mount the bar as illustrated.

- Slide the bar toward the rear of the saw as far as possible.
- Prepare the chain by checking the proper direction. Without following the illustration it is easy to place the chain on the saw the wrong direction. Use the illustration of the chain to determine the proper direction.
- Place the chain onto the sprocket located behind the clutch drum. Fit the chain between the teeth in the sprocket.
- Start at the top of the bar and fit chain into groove around the guide bar.
- Pull the bar forward until the chain is snug in the groove of the bar.
- Hold guide bar against the saw frame and install the bar clamp. Make sure the adjusting pin is aligned with the hole in the bar. Remember this pin moves the bar forward and backward as the screw is turned.
- Replace the bar clamp nuts and tighten finger tight. Once the chain is tensioned you will need to tighten bar clamp nuts.

Mount the Bar

Proper chain direction

Place chain onto the sprocket

**CHAIN TENSION** (Including units with chain already installed)

**NOTE:** When adjusting chain tension, make sure the bar nuts are finger tight only. Attempting to tension the chain when the bar nuts are tight can cause damage.

### Checking the tension:

Use the screwdriver end of the combination screwdriver/wrench tool to move the chain around the bar. If the chain does not rotate, it is too tight. If too loose, the chain will sag below the bar.

### Adjusting the tension:

Chain tension is very important. Chain stretches during use. This is especially true during the first few times you use your saw.

Always check chain tension each time you use and refuel your saw.

You can adjust the chain tension by loosening the bar clamp nuts and turning the adjusting screw 1/4 of a turn while lifting up on the bar.

- If chain is too tight, turn adjusting screw 1/4 turn counterclockwise.
- If chain is too loose, turn adjusting screw 1/4 turn clockwise.
- Lift up the tip of the bar and tighten the bar clamp nuts with the combination screwdriver/wrench.
- Recheck chain tension.

Lifts only 3 mm of an inch from bar.

Chain moves freely

## FUELING & LUBRICATION

### FUELING ENGINE

**WARNING:** Remove fuel cap slowly when refueling

This engine is certified to operate on unleaded gasoline. Before operation, gasoline must be mixed with a good quality 2-cycle air-cooled engine oil. We recommend **Jonsered** brand oil mixed at a ratio of 40:1 (2.5%). A 40:1 ratio is obtained by mixing 5 liters of unleaded gasoline with 0.125 liter of oil. If you do not use this oil, use a good quality 2-cycle air-cooled oil designed to be mixed at a ratio of 1:33 (A 1:33 ratio is obtained by mixing 5 liters of unleaded gasoline with 0.15 liters of oil. When mixing fuel follow the instructions printed on the container. Always read and follow the safety rules relating to fuel before fueling your unit.

### BAR AND CHAIN LUBRICATION

The bar and chain require continuous lubrication. Lubrication is provided by the automatic oiler system when the oil tank is kept filled. Lack of oil will quickly ruin the bar and chain. Too little oil will cause overheating shown by smoke coming from the chain and/or discoloration of the bar.

Only use Bar and Chain Oil for bar and chain lubrication.

## OPERATING YOUR UNIT

**WARNING:** The chain must not move when the engine runs at idle speed. If the chain moves at idle speed refer to **CARBURETOR ADJUSTMENT** within this manual. Avoid contact with the muffler. A hot muffler can cause serious burns.

**To stop the engine** move the switch to the **STOP** or **OFF** position.

**To start the engine** hold the saw firmly on the ground as illustrated below. Make sure the chain is free to turn without contacting any object.

Use only 15" – 18" of rope per pull.

Hold saw firmly while pulling starter rope

### Important points to remember

When pulling the starter rope, do not use the full extent of the rope as this can cause the rope to break. Do not let starter rope snap back. Hold the handle and let the rope rewind slowly.

For cold weather starting, start the unit at full choke; allow the engine to warm up before squeezing the throttle trigger. Do not cut material with the choke/fast idle lever at the **FULL** position.

### STARTING A COLD ENGINE (or a warm engine after running out of fuel)

**NOTE:** In the following steps, when the choke/fast idle lever is pulled out to the full extent, the correct throttle setting for starting is set automatically.

- Move switch to the **START** or **ON** position.
- Pull the choke/fast idle lever out to the full extent.
- Press the primer bulb fully 6 times.
- Pull the starter rope quickly with your right hand 5 times; then push the choke/fast idle lever in completely (to the **OFF** position).
- Pull the starter rope quickly with your right hand until the engine starts.
- Allow the engine to run for approximately five seconds. Then, squeeze and release the throttle trigger to release the fast idle, allowing the engine to idle.

### IGNITION SWITCH

(START) ON  STOP (OFF)

### CHOKE/FAST IDLE (SIDE VIEW)

### STARTING A WARM ENGINE

- Move switch to the **START** or **ON** position.
- Pull the choke/fast idle lever out to the full extent to set the throttle, then return the choke/fast idle lever to the **OFF** position.
- Pull the starter rope quickly with your right hand until the engine starts.
- Squeeze and release the throttle trigger to release throttle lock, allowing engine to idle.

### STARTING A FLOODED ENGINE

The engine may be flooded with too much fuel if it has not started after 10 pulls.

Flooded engines can be cleared of excess fuel by following the warm engine starting procedure listed above. Insure the ignition switch is in the **ON** or **START** position.

Starting could require pulling the starter rope handle many times depending on how badly the unit is flooded. If engine fails to start refer to the troubleshooting chart.

### CHAIN BRAKE

**WARNING:** DO NOT ASSUME THAT THE CHAIN BRAKE WILL PROTECT YOU IN THE EVENT OF A KICKBACK. Instead, use the saw properly and carefully to avoid kickback. Reduced-Kickback bars and Low-Kickback chains reduce the hazard of kickback and are recommended. If the brake band is worn too thin it may break when the chain brake is triggered. With a broken brake band, the chain brake will not stop the chain. Repairs on a chain brake should be made by a service dealer. Take your unit to the place of purchase if purchased from a servicing dealer, or to the nearest authorized service dealer.

- This saw is equipped with a chain brake. The brake is designed to stop the chain if kickback occurs.
- The inertia activated chain brake is activated if the front hand guard is pushed forward, either manually or by centrifugal force.
- If the brake is already activated, it is disengaged by pulling the front hand guard toward the front handle as far as possible.
- When cutting with the saw, the chain brake must be disengaged.

### Braking function control

The chain brake must be checked several times daily. Place the saw on firm ground. Hold the handles with both hands and apply full throttle. Activate the chain brake by turning your left wrist against the grip around the front handle. The chain should stop immediately.

### Inertia activating function control

**CAUTION:** When performing the following procedure, the engine must be turned off.

The chain brake must be checked several times daily. Hold the chain saw approximately 14" (35 cm) above a stump or other firm object. Release your grip on the front handle and let the saw, by its own weight, rotate around the rear handle. When the tip of the bar hits the stump, the brake should activate.

### IMPORTANT POINTS

- Cut wood only. Do not cut metal, plastics, masonry, non-wood building materials, etc.
- Stop the saw if the chain strikes a foreign object. Inspect the saw and repair parts as necessary.
- Keep the chain out of dirt and sand. Even a small amount of dirt will quickly dull a chain and increase the possibility of kickback.

- Practice cutting a few small logs using the following techniques to get the "feel" of using your saw before you begin a major sawing operation.
- Squeeze the throttle trigger and allow the engine to reach full speed before cutting.
- Begin cutting with the saw frame against the log.
- Keep the engine at full speed the entire time you are cutting.
- Allow the chain to cut for you. Exert only light downward pressure.
- Release the throttle trigger as soon as the cut is completed, allowing the engine to idle. If you run the saw at full throttle without a cutting load, unnecessary wear can occur.
- To avoid losing control when cut is complete, do not put pressure on saw at end of cut.
- Stop the engine before setting the saw down.

## TREE FELLING TECHNIQUES

**⚠ WARNING:** Do not cut near buildings or electrical wires if you do not know the direction of tree fall, at night since you will not be able to see well, or during bad weather such as rain, snow, or strong winds, as fall is unpredictable.

Carefully plan your sawing operation in advance. You need a clear area all around the tree so you can have secure footing. Check for broken or dead branches which can fall on you causing serious injury.

Natural conditions that can cause a tree to fall in a particular direction include:

- The wind direction and speed.
- The lean of the tree. The lean of a tree might not be apparent due to uneven or sloping terrain. Use a plumb or level to determine the direction of tree lean.
- Weight and branches on one side.
- Surrounding trees and obstacles.

Look for decay and rot. If the trunk is rotted, it can snap and fall toward the operator.

Make sure there is enough room for the tree to fall. Maintain a distance of 2-1/2 tree lengths from the nearest person or other objects. Engine noise can drown out a warning call.

Remove dirt, stones, loose bark, nails, staples, and wire from the tree where cuts are to be made.

## FELLING LARGE TREES

(15 cm in diameter or larger)

The notch method is used to fell large trees. A notch is cut on the side of the tree in the desired direction of fall. After a felling cut is made on the opposite side of tree, the tree will tend to fall into the notch.

## NOTCH CUT AND FELLING THE TREE

- Make notch cut by cutting the top of the notch first. Cut through 1/3 of the diameter of the tree. Next complete the notch by cutting the bottom of the notch. See illustration. Once the notch is cut remove the notch of wood from the tree.
- After removing the cutout of wood, make the felling cut on the opposite side of the notch. This is done by making a cut about two inches higher than the center of the notch. This will leave enough uncut wood between the felling cut and the notch to form a hinge. This hinge will help prevent the tree from falling in the wrong direction.

Final cut here. 5 cm above center of notch.

Hinge holds tree on stump and helps control fall

**NOTE:** Before felling cut is complete, use wedges to open the cut when necessary to control the direction of fall. Use wood or plastic wedges, but never steel or iron, to avoid kickback and chain damage.

- Be alert to signs that the tree is ready to fall: cracking sounds, widening of the felling cut, or movement in the upper branches.
- As tree starts to fall, stop saw, put it down, and get away quickly on your planned retreat path.
- Be extremely cautious with partially fallen trees that may be poorly supported. When a tree doesn't fall completely, set the saw aside and pull down the tree with a cable winch, block and tackle, or tractor. To avoid injury, do not cut down a partially fallen tree with your saw.

## CUTTING A FALLEN TREE (BUCKING)

Bucking is the term used for cutting a fallen tree to the desired log length.

**⚠ WARNING:** Do not stand on the log being cut. Any portion can roll causing loss of footing and control. Do not stand downhill of the log being cut.

### Important points

- Cut only one log at a time.
- Cut shattered wood very carefully; sharp pieces of wood could be flung toward operator.
- Use a sawhorse to cut small logs. Never allow another person to hold the log while cutting and never hold the log with your leg or foot.
- Do not cut in an area where logs, limbs, and roots are tangled. Drag the logs into a clear area before cutting by pulling out exposed and cleared logs first.

## TYPES OF CUTTING USED FOR BUCKING

**⚠ WARNING:** If saw becomes pinched or hung in a log, don't try to force it out. You can lose control of the saw resulting in injury and/or damage to the saw. Stop the saw, drive a wedge of plastic or wood into the cut until the saw can be removed easily. Restart the saw and carefully reenter the cut. Do not attempt to restart your saw when it is pinched or hung in a log.

Turn saw OFF and use a plastic or wooden wedge to force cut open.

**Overcutting** begins on the top side of the log with the saw against the log. When overcutting use light downward pressure.

### Overcutting

### Undercutting

**Undercutting** involves cutting on the underside of the log with top of saw against the log. When undercutting use light upward pressure. Hold saw firmly and maintain control. The saw will tend to push back toward you.

**⚠ WARNING:** Never turn saw upside down to undercut. The saw cannot be controlled in this position.

First cut on pressure side of log

Second cut

First cut on pressure side of log

## BUCKING WITHOUT A SUPPORT

- Overcut through 1/3 of the diameter of the log.
- Roll the log over and finish with a second overcut.
- Give special attention to logs under strain to prevent the saw from pinching. Make the first cut on the pressure side to relieve the stress on the log.

## BUCKING USING A LOG OR SUPPORT STAND

- Remember your first cut is always on the pressure side of the log.
- Your first cut should extend 1/3 of the diameter of the log.
- Finish with your second cut.

### Using a support stand

## LIMBING AND PRUNING

**⚠ WARNING:** Never climb into a tree to limb or prune. Do not stand on ladders, platforms, a log, or in any position which can cause you to lose your balance or control of the saw.

### IMPORTANT POINTS

- Watch out for springpoles. Use extreme caution when cutting small size limbs. Slender material may catch the saw chain and be whipped toward you or pull you off balance.
- Be alert for springback. Watch out for branches that are bent or under pressure. Avoid being struck by the branch or the saw when the tension in the wood fibers is released.
- Frequently clear branches out of the way to avoid tripping over them.

## LIMBING

- Always limb a tree after it is cut down. Only then can limbing be done safely and properly.
- Leave the larger limbs underneath the felled tree to support the tree as you work.
- Start at base of the felled tree and work toward the top, cutting branches and limbs. Remove small limbs with one cut.
- Keep the tree between you and the chain as much as possible.
- Remove larger, supporting branches with the 1/3, 2/3 cutting techniques described in the bucking section.
- Always use an overcut to cut small and freely hanging limbs. Undercutting could cause limbs to fall and pinch saw.

## PRUNING

**⚠ WARNING:** Limit pruning to limbs shoulder height or below. Do not cut if branches are higher than your shoulder. Get a professional to do the job.

- Make your first cut 1/3 of the way through the bottom of the limb.
- Next make a 2nd cut **all the way through the limb**. Then cut a third overcut leaving a 1 to 2 inch collar from the trunk of the tree.

## SERVICE AND ADJUSTMENTS

We recommend all service and adjustments not listed in this manual be performed by an Authorized Service Dealer.

- Lightly coat the filter with 2-cycle oil before re-installing.

### TROUBLESHOOTING CHART

Engine will not start.

- Ignition switch off.
- Engine flooded.
- Fuel tank empty.
- Spark plug not firing.
- Fuel not reaching carburetor.

Engine will not idle properly.

- Carburetor requires adjustment.
- Crankshaft seals worn.

Engine will not accelerate, lacks power, or dies under a load.

- Air filter dirty.
- Spark plug fouled.
- Carburetor requires adjustment.

Engine smokes excessively.

- Too much oil mixed with gasoline.

## BAR MAINTENANCE

If your saw cuts to one side, has to be forced through the cut, or been run with an improper amount of bar lubrication it may be necessary to service your bar. A worn bar will damage your chain and make cutting difficult.

Replace your bar if bent or the inside rails of the bar are worn.

- Clean the oil holes after each 5 hours of operation
- Remove sawdust from bar groove periodically with a wire or putty knife.

## AIR FILTER

**⚠ CAUTION:** Do not clean filter in gasoline or other flammable solvent to avoid creating a fire hazard or producing harmful evaporative emissions.

A dirty air filter decreases engine performance and increases fuel consumption and harmful emissions. Always clean after every 5 hours of operation.

### Cleaning the air filter:

- Clean the cover and the area around it to keep dirt and sawdust from falling into the carburetor chamber when the cover is removed.
- Remove the parts as illustrated.
- Wash the filter in soap and water.

## CARBURETOR ADJUSTMENTS

Carburetor adjustment is critical and if done improperly can permanently damage your unit. We recommend you contact an authorized service dealer for adjustments.

## CHAIN SHARPENING

Chain sharpening is a complicated task that requires special tools. We recommend that you refer chain sharpening to a professional chain sharpener.

## IGNITION TIMING

Ignition timing is fixed and nonadjustable.

## SPARK PLUG

Replace the spark plug yearly using a Champion RCJ-7Y. Gap to 0,5 mm.

## STORAGE

**⚠ WARNING:** Stop engine and allow to cool, and secure the unit before storing or transporting in a vehicle. Store unit and fuel in an area where fuel vapors cannot reach sparks or open flames from water heaters, electric motors or switches, furnaces, etc. Store unit with all guards in place. Position so that any sharp object cannot accidentally cause injury to passersby. Store the unit out of reach of children.

- Before storing, drain all fuel from the unit. Start engine and allow to run until it stops.
- Clean the unit before storing. Pay particular attention to the air intake area, keeping it free of debris. Use a mild detergent and sponge to clean the plastic surfaces.
- Do not store the unit or fuel in a closed area where fuel vapors can reach sparks or an open flame from hot water heaters, electric motors or switches, furnaces, etc.
- Store in a dry area out of the reach of children.

**⚠ CAUTION:** It is important to prevent gum deposits from forming in essential fuel system parts such as the carburetor, fuel filter, fuel hose, or fuel tank during storage. Alcohol blended fuels (called gasohol or using ethanol or methanol) can attract moisture which leads to fuel mixture separation and formation of acids during storage. Acidic gas can damage the engine.

## DECLARATION OF CONFORMITY relating to 2000/14/EC

### EU Declaration of Conformity relating to 2000/14/EC

We, **Poulan/Weed Eater, Division Electrolux North America, Inc.**, Texarkana, TX, 75501, USA, Tél. : +1 903 223 4100, declare under sole responsibility that the **Jonsered model 2035 chain saw** was assessed in accordance with Annex V of the DIRECTIVE and from serial numbers 2001-305(N or D)00001 and onwards, conforms to the provisions of the DIRECTIVE. The net power is 1,57 kW. The measured sound power is 114 dB and the guaranteed sound power is 118 dB.

Product Safety and Standards

## DECLARATION OF CONFORMITY relating to 89/392/EEC

**EU declaration of conformity** (Directive 89/392/EEC, Annex II, A) (Only applies to Europe)

We, **Poulan/Weed Eater, Division Electrolux North America, Inc.**, Texarkana, TX 75501, USA, Tel: +1 903 223 4100, declare under sole responsibility that **Jonsered model 2035 chain saw** from serial numbers 2001-305(N or D)00001 and onwards, follows the provisions of the DIRECTIVES: **89/392/EEC** (machinery) and **89/336/EEC** (electromagnetic compatibility), including amendments and is in conformity with the following standards: **EN 292-2, EN 608 and CISPR 12**.

The supplied Chain Saw conforms with the sample that underwent the EU type approval.

**Notified body, 0404 the Swedish Machinery Testing Institute**, Fyrisborgsgatan 3 S-754 50 Uppsala, Sweden, has carried out EU type approval. The certificate(s) are numbered: **404/98/597**.

Safety and Standards

# TECHNICAL DATA SHEET

<b>Engine</b>	<b>2035</b>
Cylinder volume, cm <sup>3</sup>	36
Stroke, mm	32
Idle speed, rpm	3,000
Recommended max. speed, unloaded, rpm	13,000
Power, kW	1,57

<b>Ignition system</b>	
Manufacturer	Walbro
Type of ignition system	CD
Spark plug	Champion
Electrode gap, mm	0,5

<b>Fuel and lubrication system</b>	
Manufacturer	Walbro
Carburetor type	WT 391
Fuel capacity, litre	0,38
Oil pump capacity at 8500 rpm, ml/min	4 - 8
Oil capacity, litre	0,29
Type of oil pump	Automatic

<b>Weight</b>	
Without bar and chain, kg	4,7

Length	BAR		CHAIN	
	Pitch	Max	Tip Radius	
Inches	Inches			
14	0.375	7T	Oregon 91VJ	
16	0.375	7T	Oregon 91VJ	

<b>Noise levels</b>	<b>2035</b>
Equivalent (see note 1) noise pressure level at operator's ear, measured according to relevant international standards, dB(A)	90,6
Equivalent (see note 1) noise power level, measured according to relevant international standards, dB(A)	114

<b>Vibration levels</b> (see note 2)	
Front handle, m/s <sup>2</sup>	4,18
Rear handle, m/s <sup>2</sup>	6,84

<b>Chain/bar</b>	
Standard bar length, in/cm	14/36 16/41
Recommended bar lengths, in/cm	14/36 16/41
Usable cutting length, in/cm	13,5/35 15,5/40
Chain speed at maximum power, m/sec	18,5 18,5
Pitch, inches	0,375 0,375
Thickness of drive link, mm	1,27 1,27
No. of teeth on drive sprocket	6 6

**Note 1:** Equivalent noise level is, according to ISO 7182 and ISO 9207, calculated as the time-weighted energy total for noise levels under various working conditions with the following time distribution, 1/2 idle, 1/3 full load, 1/3 full speed.

**Note 2:** Equivalent vibration level is, according to ISO 7505, calculated as the time-weighted energy total for vibration levels under various working conditions with the following time distribution: 1/3 idle, 1/3 full load, 1/3 full speed.

<b>Type</b>	<b>Inch</b>	<b>Inch/mm</b>	<b>Inch/mm</b>	<b>Degree°</b>	<b>Degree°</b>	<b>Degree°</b>	<b>Inch/mm</b>	<b>in/cm :dl</b>
